Experience

Software Engineer Niantic Spatial Inc.

Sep 2023 - Present Palo Alto, CA

- Architected and integrated face, world, and image target tracking and VPS tools with a 3D rendered interactable simulator for the award-winning 8th Wall WebAR multiplatform game engine used by a quarter million developers worldwide
- Configured computer vision based wrist tracking end-to-end implementation ML model into a custom built XR engine
- Prototyped object tracking to create AR interactive experienced based on 3D objects reconstructed with photogrammetry and enhanced internal visualization tools to quickly iterate through hyperparameter fine-tuning experiments
- Empowered the team by leading interviews, mentoring interns, and reviewing code to ship production-ready projects

HXI Software Developer UCSD HXI Research Lab

Apr 2022 - Mar 2023 San Diego, CA

- Projected a 3D point cloud hologram from a Kinect camera streamed to a Hololens AR space
- Stitched together 3 Kinect camera feeds from filtering RGB-D data and calibrating intrinsics with ChArUco boards
- Iterated on designs by adding interactable frontend UI to AR medical devices to suit the needs of medical clients

Computer Vision Intern Niantic Inc.

Jun 2022 - Sep 2022 Palo Alto, CA

- Incorporated ML multiclass semantic segmentation into 8th Wall's WebAR platform's computer vision pipeline
- Optimized ML inference from ~200ms to ~60ms per frame on the web displayed in ~60fps for mobile devices
- Collaborated with teams across the board to discuss the design and implementation of semantics in an AR engine

Software Engineer Intern 8th Wall

Jun 2021 - Sep 2021 Palo Alto, CA

- Wrote training and tflite conversion scripts in TensorFlow for DL monocular depth estimation models based on PyDNET
- Streamlined the training process for ML depth models from data collection to evaluation with 3D point cloud visualizations

Embedded Systems Intern 🏠 NVIDIA

Jun 2017 - Aug 2017 Santa Clara, CA

- Trained an AI remote-controlled racecar to autonomously navigate and identify people in the building
- Modified Jetson TX2 Ubuntu Linux kernel to support an external USB camera and LiDAR sensor

Projects

Computer Rendering Ray Tracer

Apr 2022 - Jun 2022 C++

- Wrote a ray tracer utilizing Monte Carlo Integration, optimized with bounding volume acceleration structure
- Implemented depth of field on top of path tracing and next-event estimation for high quality rendering
- Supported glass models by calculating the Fresnel refraction using Schlick's approximation

Exploding Kitchen Recipe App exploding-kitchen.netlify.app 🏠

Sep 2021 - Dec 2021 HTML, CSS, Node.js, IndexedDB

- Lead a team of 10 students through an agile development process to build a CRUD web recipe app stored by spiciness
- Connected the database management backend of the app to the frontend UI with user experience in mind

Education

De Anza College Computer Science

Aug 2018 - Jun 2020 3.98 GPA

University of California, San Diego Computer Science BS

Sep 2020 - Jun 2023 3.93 GPA

Skills

Languages: C++, Java, Python, C#, HTML/CSS, SQLite, XML, Javascript, TypeScript, React, WebGL, WASM, Robotics

Tools: Git, Unity Engine, Godot Engine, Linux, TensorFlow, OpenCV, OpenGL

Human Languages: English (native), Vietnamese (Fluent), Spanish (conversational)
